SUMMARY

Partnerships and go-to-market leader with 15+ years building developer ecosystems and closing partnerships that help technical companies turn complex products into platforms customers adopt and pay for. I recruit and enable partners, run the events and community programmes that bring them on board, and own commercial relationships from first contact through renewal. In my most recent partnerships role I closed around €1M a year in partnership and sponsorship contracts, with a peak of €3M in 2025.

I also build AI products directly: two shipped LLM-based products with governance layers and API integrations, plus MSc research on the governed adoption of AI systems. This lets me talk to founders, developers and engineers as a peer and understand what AI projects need to reach production. Fluent English (C1), native Russian.

CORE STRENGTHS

Technology and startup partnerships · Business development and deal closing · Developer ecosystems and DevRel · Partner enablement, events and community · AI adoption, feasibility and governance · Applied AI building (LLM products, APIs) · Cross-functional GTM (product, engineering, marketing) · Trusted advisor to founders, developers and CTOs · Pipeline, negotiation and CRM discipline (amoCRM) · Fluent English, native Russian

EXPERIENCE

Founder and AI Builder, LuxPilot

Remote · 2024 – present

- Built LuxPilot, a governed LLM advisory system, developed and defended as part of my MSc research at the University of Luxembourg, and shipped a second AI product applying the same architecture.
- Advise deep-tech and AI companies on partner strategy, go-to-market and AI adoption, and build LLM-based products hands-on (APIs, governance controls), working directly with technical teams and founders.

Senior Partnerships and Key Account Manager Tech Internals (contract)

Remote / Europe · 2022 – 2025

- Owned commercial partnerships from first contact to close: recruiting, negotiating and closing. Delivered around €1M a year in partnership and sponsorship contracts, with a peak of €3M in 2025.
- Recruited, enabled and co-sold with strategic partners including Nebius and Exness. Directed a technology conference in Serbia and managed Nebius as a strategic partner across EU, Serbian and post-Soviet communities.
- Ran partner events, enablement and co-marketing that activated partners and progressed pipeline. Maintained CRM discipline (amoCRM) and forecasting.

Senior Consultant, Partnerships and Developer Conferences Ontico

Remote · 2020 – 2022

- Recruited and managed key partner relationships, using flagship developer conferences as ecosystem, enablement and demand-generation engines.

Head of Communications and Developer Ecosystem Postgres Professional

2015 – 2020

- Built the developer ecosystem for a leading PostgreSQL vendor, running partner programmes, developer community, enablement and content that drove adoption at scale.
- Launched and grew the flagship conference (PGConf) from zero to 700+ attendees, and acted as trusted advisor to partners, developers and CTOs, feeding field insight back to engineering.

Head of Events and B2B Community Leading online classifieds and marketplace platform

2013 – 2014

- Built a B2B community and enablement programme with 30+ seminars and 35+ speaking engagements. Contributed to regional B2B sales growth from 5% to 20%.
- Earlier: senior event and programme roles at BDO and Baker Tilly.

APPLIED AI, PRODUCTS BUILT

- LuxPilot (luxpilot.app): I created an LLM-based advisory system with a three-layer architecture. A deterministic governance engine (rules and feasibility gates) sits between user and model, so generation happens only under quality gates and human validation. The governance-first design is informed by the EU AI Act and was developed and evaluated through my MSc research on the governed adoption of AI. The work is applied and hands-on: product design, governance logic and API integration.
- Educational activity planner: built and shipped a consumer AI product with structured outputs, LLM and NLP orchestration and freemium monetization, using the same governed architecture in the education space.

EDUCATION

MSc, Entrepreneurship and Innovation, University of Luxembourg | 2024 - 2026

Thesis: an AI-driven marketing architecture for microenterprises, a governed three-layer meta-model (Design Science Research).

Dual graduate degree, Management and Psychology / Philology and Interpreting, Kuban State University | 2001 - 2006

LANGUAGES

English fluent, C1 (IELTS 7.5) · **Russian** native · **French** elementary
